Career Objective

Motivated B.E. Artificial Intelligence and Data Science student with hands-on experience across the software development lifecycle, from requirement understanding and design through coding, testing, and documentation. Skilled in Python, SQL, and database-driven application development, with a working foundation in debugging, query optimization, and writing efficient, maintainable code. Seeking an entry-level Software Engineer / Product Engineer role to design, build, and support reliable software products.

Technical Skills

Programming Languages: Python, C, SQL
Software Development: SDLC, Object-Oriented Programming, Debugging & Testing, DBMS
Database & Query Work: MySQL, MongoDB, schema design, query optimization
Data Visualization: Matplotlib, Seaborn, Power BI, Tableau, Excel
Tools: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

Education

Bachelor of Engineering – Artificial Intelligence and Data Science, SDMIT, Ujire 2023–2027
Pre-University Course (PCMB), Bhavathi Excellence PU College, Malavalli 2023

Internship Experience

Machine Learning Intern – iStudio

- Contributed across the ML development lifecycle — requirement understanding, data preprocessing, model building, testing, and documentation.
- Performed data preprocessing and Exploratory Data Analysis (EDA) on datasets to prepare reliable inputs for model development.
- Engineered relevant features and evaluated model performance using appropriate metrics, iterating on implementation based on results.
- Debugged workflows and improved implementation quality through systematic experimentation and peer code reviews.
- Collaborated with a cross-functional team on AI/ML projects, following structured development and review processes.

Projects

AI Career and Job Matching Platform

Technologies: Python, Flask, Machine Learning, SQL, HTML, CSS, JavaScript

- Developed an AI-powered web platform that analyzes candidate profiles, skills, and career interests to recommend relevant job opportunities.
- Implemented a machine learning-based matching system to compare candidate skills with job requirements and generate suitable job recommendations.
- Designed a user-friendly web interface for profile management, skill input, job discovery, and personalized recommendations.
- Integrated backend functionality using Flask and SQL for efficient data processing, storage, and retrieval.

Student Performance Indicator – End-to-End ML Pipeline

Technologies: Python, Scikit-learn, Pandas, NumPy, Jupyter Notebook

- Developed an end-to-end ML pipeline predicting student academic performance from structured data, following a structured build-and-test process.
- Performed data cleaning, preprocessing, EDA, and feature engineering using Python.
- Implemented and compared Linear Regression, Decision Tree, and Random Forest models using suitable evaluation metrics.
- Used Pandas, NumPy, and visualization techniques to analyze data and identify important patterns.

Certifications

- NPTEL – Software Conceptual Design
- Infosys Springboard – Python: Interactive Computing and Visualization Cookbook

Achievements

- Participated in the 24-Hour Hackyugma Hackathon, collaborating with a team to develop and present a functional prototype under time constraints.
